### IMPORTANT NOTE ABOUT OUR IRON HARDWARE AND PATINAS:

Our Iron hardware is artificially coated with lacquer or powder coating. It is the genuine article made by our master blacksmiths. THERE IS NO WARRANTY ON THE FINISH - it is not rust-proof. We apply an authentic wax coating.

All iron orders require a FINISH WAIVER signed by the dealer confirming understanding of this.

With regular care and maintenance, this hardware is made to last a lifetime. Care and Maintenance instructions are included with every order.

The patinas which hold up best against rust are Hot Wax and Antique Rose. These are also the easiest to maintain.

The patinas most likely to rust sooner are Satin Nickel, Old Pawn Silver, and Antique Copper. They are also more complicated to maintain.

That said, most iron patinas will hold up OK interior environments.

All patinas are hand applied and will vary from patina samples or display samples, as well as from each piece within an order. This is due to aging of samples, and natural variations in patina which occur depending upon surface texture of the iron, the design, temperature and humidity while the patina is applied. These variations are considered to be a key characteristic of the beauty and uniqueness of our hand forged iron products, and are not a defect.

All our patinas are living finishes and will age gracefully over time. How quickly they age depends upon the conditions of use and maintenance.

**ADDITIONAL INFORMATION REQUIRED WITH ORDER: FOR ALL 2" WIDE ESCUTCHEONS**

ESCUTCHEON AESTHETIC CHOICE - FOR IRON MULTIPOINT SETS

Thank you for your order for our unique Hand forged Iron Multipoint Retrofit Hardware. All of our Iron Multipoint sets will fit on 1.75" thick doors and up.

Depending upon your door conditions and aesthetic choice, we offer the following TWO OPTIONS for the Iron Escutcheons. We recommend OPTION 2.

**OPTION 1:** Flush-look Escutcheon in front, with our spring-assist proud of the escutcheon on the back.

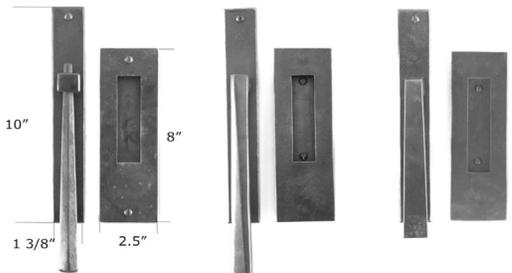

This means that the installer will need to make a 1.75" diameter bore into the door, on both sides, to fit the spring assist inside the door.

**OPTION 2:** Built-up Escutcheon in the front @lever, with fully concealed spring-assist on the back.

This is an easier installation, with no additional boring needed into the door (except for the lever spindle).
